

Outlet CO conversion vs. Inlet pressure

$\text{H}_2/\text{CO} = 5.0$ | $T_{\text{in}} = 370^\circ\text{C}$ | $W_{\text{cat}}/F_{\text{CO, in}} = 140.4 \text{ kg}_{\text{cat}} \text{ s mol}_{\text{CO}}^{-1}$

Pressure values are restricted to the 5–15 bar fitted kinetic range. Open circle: best sampled value. The vertical axis is zoomed to show this slice.
